Dr Ben van Hooijdonk is a senior scientist within the Fruit Crops Physiology Group of the New Zealand Institute for Plant & Food Research Ltd., based at the Hawke’s Bay Research Centre, Havelock North, New Zealand. He has worked within the New Zealand fruit industry for 24 years. His present role primarily involves optimising quality and productivity of apple, pear and kiwifruit for the New Zealand fruit industry. Current areas of research include rootstock, cultivar and training system evaluation, and management of canopy architecture to increase productivity and fruit quality.
